Case Study: Business Plan for EIB

Project: Aircraft Repairs and the Development of the Electron Beam

Preparation of a business plan and strategy of a foreign company operating in the aircraft turbine repair segment and electron beam welding in Bulgaria.

Investment of €27 mil.

Need: Creation of a detailed financial model with a debt service for 3-5 years altogether with the consolidation of the entire strategy & process for EIB.

Result:

Creating a comprehensive business plan and starting negotiations with the EIB regarding the investment.

The EIB transferred the investment mandate to the local Bulgarian branches of EIB, where the project was accepted.

Solution:

Consulting with management and collecting data about the company from external and internal sources. The result of the analysis pointed to a change in management structure, the resolution of own sources of financing through a loan and setting up the process for the EIB bank.
